White Ink Recirculation System

The white ink circulates at regular intervals during idle mode to prevent pigment sedimentation, which can cause print head malfunctions. The white ink stirring unit ensures smooth ink flow.

Steel Beam

The high-precision steel beam and linear guide ensure the stability of the X-axis movement, and significantly improving the printing quality.

Built-in Cylinder Printing Kit

The built-in cylinder printing kit makes the printing for cylinder much effective and user-friendly.

Auto Media Height Detector

Automatic laser-based height detection (up to 60mm) ensures precise and convenient setup of the ideal working height.

Powerful Suction Platform

One button-controlled suction platform enables easy operation, while top-down calibration modules makes adjustments easier and faster.

Camera Positioning System

Available with **OPTIONAL** CPS system now. By scanning substrate with a high-precision camera, this system enable precise positioning and image matching, overcoming the limitation of manual layout lines.
